5-Oct-2017 Is there an equivalent to JOBSTART for AutoCAD Civil 3D 2015 & 2017? Share your knowledge, ask questions, and explore popular AutoCAD Civil 3D topics.. When "Fast Forward" is on and under the "Save" tab is there a way to save to disc and not save to the toolbar . Share your knowledge, ask questions, and explore popular AutoCAD Civil 3D topics.. I have attached two screenshots to my post and also that. Is it possible to generate a report using 3d elevation model or topo map after "Flip And Scan" operations? Share your knowledge, ask questions, and explore popular AutoCAD Civil 3D topics.. Does anyone know how to do this? I have attached two images to my post. . A: From the screenshot you posted, it looks like you're missing the proper PostScannedGeometry. To get PostScannedGeometry working for a non-Manifold geometry, it must be a polyline or multi-line. Your output appears to be a line (or multi-line) geometry. You might want to check the errors window (errors > geometry), or enable the 'Update geometry' options (tools > options > updates > updates & checking). That should fix the issue. Addendum: As for the missing 'Flip' options, that would be due to the settings in your Project Settings tab. Open the project settings (options > project settings > settings) and make sure that the 'project output options' are set to 'save 1 layer only'. If your geometry is not manifold (ie - lines, polylines, polygons, etc), you can turn off the.suuave option in your project settings. (Note: I had also run into this issue where the 'Turn Off Toolbars' option was on, but the toolbars would still appear in the drawings. If this is a problem for you, remove that option from your project settings and see if the issue still persists.) The present invention relates to an inter-sector concentrator and to a method of operating a concentrator. Concentrators, such as a concentrator for concentrating solar radiation, are often provided as a fixed system. Typically, solar radiation enters a first half of the concentrator and is reflected into the second half by a mirror. The reflected
