Interoperability with other Autodesk products AutoCAD has supported interchangeability of its design data with other Autodesk products such as AutoCAD Architecture, AutoCAD Electrical, and AutoCAD Civil 3D, as well as third-party products. For data interchange with other AutoCAD products, users can open, edit, and save file formats compatible with the other products. In addition, drawing objects can be shared, so users can

draw with other product's dialogs. The minimum level of compatibility is between AutoCAD 2005 and AutoCAD 2012; however the level of compatibility increases with each major release. In AutoCAD, components can be removed from a drawing and later added again. For this, there are two types of data: Base data which is stored in an easily editable form, as described above. Settings data, which contains the relationships and definitions between the objects and the data created by the designer. In AutoCAD, this data is stored in an XML file, which is called parameterization. Add-on applications are created in such a way that base data can be stored locally and application settings data can be stored in a server. And he was so far upfield when the ball rolled into the endzone, he may as well have been in Super Bowl.
