Dates Reminder is a lightweight software application developed specifically for helping you remember birthdays or anniversaries. It is compatible with Windows XP, Vista, and 7. You need to install Microsoft.NET Framework 3.5 on the host PC in order to avoid receiving error messages and other types of bugs. Drop it on pen drives It's easy to carry Dates Reminder with you all the time because you can save it on USB flash drives or other similar devices. You do not need to go through an installation process because you can gain access to the GUI by running the executable file. No administrative privileges are required for opening the tool on a target computer. In addition, it does not leave entries in your Windows registry and generate additional configuration files, so you may get rid of it by deleting the files that you have downloaded from the Internet. Look for the app in the system tray Dates Reminder resides quietly in the system tray without interfering with your work. The configuration panel looks simple and clean so you are not going to spend a lot of time tweaking the dedicated parameters. Set up new events The application offers you the possibility to store a new record in the database by providing information about the name, selecting the date from a built-in calendar, and choosing the preferred category, namely birthday or anniversary. The integrated calendar comes bundled with basic options for helping you jump to the current date, go to the next or previous month, or access a specific date. All records are displayed in a simple list. Plus, you are given the freedom to show all events or filter the items by current day of the week or upcoming 7, 31, or 365 days. If you move the mouse cursor over the tray icon, Dates Reminder shows the events for the current day. What's more, you can remove events from the database. Final remarks To sum things up, Dates Reminder provides a simple software solution for helping you remember important dates, and is ideal especially for less experienced users. The app is not a resource hog so you do not have to worry that it affects the overall performance of the PC. ]> 2.7.1 for Linux
