Photoshop is Photoshop is Photoshop is Photoshop. Image credit: Pixabay Adobe Photoshop has been the industry standard for image manipulation since it was first released in 1991 as Adobe Photoshop 1.0. Adobe Photoshop has since undergone many revisions, and yet its core functions and capabilities have remained largely unchanged. Image editing capabilities Photoshop is a graphics-editing and page layout program with additional special effects. It is usually bundled with other Adobe software such as Illustrator, InDesign, or Lightroom. The following sections describe the key features of Photoshop and how to use them. Basic editing tools Most of Photoshop's editing tools enable you to make basic image adjustments. An adjustable shape tool, for example, allows you to draw and edit paths, and then convert them to paths or pixels. These tools may be inaccessible depending on how you have customized the program. The Adjustment panel located at the upper-right corner of the Photoshop workspace (see Figure 1) is often helpful in locating tools and tools' options. Figure 1: The upper-right Adjustment panel is a useful reference when editing an image. Basic adjustments A variety of adjustments let you change the brightness, contrast, or color of an image. A flat object can be transformed into a 3D object by using the 3D tools. A tonal adjustment or curves panel gives you more control over color and adjusts the tone of an image. This section explains how to make the most of Photoshop's basic editing tools. Note: Many of the following tasks can also be done with a standard graphics program such as Photoshop Elements. Using a graphics program with expertise and practice will always help you produce better results. Adjustments: Brightness, Contrast, and Saturation When you open an image, it appears as a preview of what your finished image will look like. Sometimes, it may not be a perfect preview because you haven't yet adjusted the picture's brightness, contrast, or saturation. To preview your image's brightness, contrast, and saturation, press and hold the Command (Mac: Ctrl) key and then click the Brightness/Contrast/Saturation icon located at the bottom of the Adjustment panel (see Figure 1). Adjustments panel can help you change the brightness, contrast, and saturation of an image. To change the brightness of an image, press and hold the Shift key while changing the brightness. Similarly, to change the contrast, press and

Lars Klinting, the author of this article on the European Trifolium, published his work on the Revista Brasileira de Orquídea in the 1999. Klinting mentioned that the European species was similar to Trifolium uniflorum (as it was in the pages of the 1892. Nueva Flora that which is described as Trifolium Atropurpureum) and Trifolium angustum. The article is quite an interesting compendium of the characteristics of the species, so I reproduce it as it was written in the Revista Brasileira de Orquídea 1999.Q: Page content disappears/disappears when redirected with javascript I have a page that contains 2 div's with a little javascript (jquery) inside it, that takes 2 div's and hides them using the javascript and then shows 1 on the 2nd load. The problem is that if you refresh the page or even go back to the page with an anchor tag, the page content disappears. Here's a picture of how it should look: Here is the javascript: function Foo() { window.location.href = "bar.html"; } function Foo() { if(localStorage.state === "state") { document.getElementById("div1").style.display = "block";
