It was developed for both in-flight-refueling and as a tractor aircraft, as well as for ground refueling. It was a gas turbine-powered version of the earlier Rolls-Royce Avon 75, being a development of the Avon II, but the best-known version was the Avon Mark II in which the engines were the Rolls-

Royce Avon 69/80. Development
The first examples of the Avon Mark II were delivered to the Royal Air Force in 1965. They were originally powered by the Rolls-Royce Avon 69 or Avon 80 turboprop engines of the same displacement as a liquid-fuelled Avon 75, and subsequently by the more powerful Avon 80F. The first variants of the Avon Mark II in the United States were powered by the Rolls-Royce Avon 55 or

Avon 60 turboprops. The most important aerodynamic variations were the revised vertical tail surfaces and a redesigned exhaust arrangement. A powerful combined turbo-electric generator increased fuel efficiency and added to the aircraft's range. The new Rolls-Royce Avon 69 configuration was mounted in the rearmost of the four wings.

Comments and Discussions Good question. I haven't found the answer on the web. I did look around and found this on Microsoft's site (which seems to be the closest I could find in terms of the usage of Fast Copy as a solution. I would be grateful if anyone could point me to a more definitive solution, or list of what tools you should not use. Cheers, Fast. Hi, I cant help to resolve this problem, I use

Parallels Desktop version 3.1.3 and Windows XP Professional x64. I found the solution in this web site: Thanks for all.
