Autodesk has upgraded AutoCAD for Professionals version 2015 with features like enhanced multitouch support, including the ability to paint and draw using multi-touch gestures. New software versions and compatible hardware are often announced at events like the annual AEC Conference. On June 26, 2015, Autodesk released AutoCAD for Architectural Design, now referred to as AutoCAD Architecture. AutoCAD Graphics Technology Until 2015, AutoCAD used the same 3D graphics technology it had used since version 14.0 in 1990, a proprietary component technology known as "solid modeling." This technology is now known as the "AutoCAD GL. Ray tracing, ray casting, vector graphics and raster graphics (raster drawing) are supported in other AutoCAD products, but they are not used in AutoCAD. (See the summary of AutoCAD features here.) For a graphical explanation of these different techniques, see our article on Architectural Design Appearances. Unlike other solid modeling CAD systems, AutoCAD still lacks ray tracing technology. In contrast, other CAD systems such as Trimble RayStation's solution with ray tracing and other capability can rival AutoCAD in accuracy. When AutoCAD was introduced in 1982, it used simple ray casting to model curves and surfaces in 3D. The 3D Model Editor includes curve-generation tools and spline-based surfaces for the creation of 3D models, as well as a wide variety of textured surfaces and materials. These surfaces can be hidden or shown as wireframes, shaded or wireframe, and rendered as a texture. (You can see the difference between the different rendering modes in the picture below.) On March 14, 2012, Autodesk and Inventor LLC announced the release of a new version of Inventor V6, supporting a new 3D model format, 3D PDF. The new feature was designed to provide the ability to import 3D models from Autodesk SketchBook Pro and Inventor. Previously, it was not possible to import 3D models from other Autodesk software, as the format was proprietary. SketchBook Pro is a 3D design application with vector graphics capabilities. On April 4, 2012, AutoCAD was the only program to receive a Gold certification from the Software Quality Institute (SQI) for the 2011–2012 version cycle. On December 10, 2012 Autodesk released AutoCAD 2012, the first release since the introduction of AutoCAD LT in 2004. AutoCAD 2012 offers a new user interface, the ability to lay out architectural floor plans, and standardization of several features. The most recent version is AutoCAD 2014. It supports 64-bit, which allows it to open larger drawings, and is able to use more memory, which allows it to support large drawings. The new features include the ability to export CAD models to a format that can be read by Autodesk's 3ds Max, so that they can be further manipulated in that software and other software. AutoCAD was again the only CAD application to receive a Gold certification from the Software Quality Institute (SQI) for the 2012–2013 version cycle. For 2012, Autodesk claimed that AutoCAD had 28 million licenses sold. By the third quarter of 2015, this had increased to 41.7 million, and as of 2015, 55 million licenses had been sold. AutoCAD usage AutoCAD usage is governed by national license agreements between the software manufacturer and the end user. In some countries, AutoCAD is allowed to be distributed free of charge, in others the software is sold at a price which includes training and support. AutoCAD may be installed on a home PC, a workstation (for design professionals), a server, or a mainframe (for large organizations such as utilities, the government or other industries). Clinical and cost-utility analysis of a multidisciplinary intervention for reducing neonatal mortality. Improved quality of care during the first days of life reduces neonatal mortality. In this study we investigated the cost-utility of an intervention, based on local standards of neonatal care, for reducing neonatal mortality. A cost-utility analysis was conducted using a societal perspective. The intervention was a multidisciplinary programme focusing on quality of care during the first days of life. Incremental cost-effectiveness ratios (ICERs) were calculated in cost per reduction in neonatal mortality per 100,000 inhabitants. One-way sensitivity analyses were conducted. The ICER was calculated at USD 4,288 per neonatal death avoided. A 40% reduction in neonatal mortality was obtained. The results were robust to variations in cost, probability of effectiveness, and other parameters. The intervention was cost-effective when interventions for reducing neonatal mortality were considered separately, and the increase in efficiency was particularly high when considering the reduction in disability at early ages. Sensitivity analyses showed that the interventions which increased the effectiveness of care (based on improved bonding of the parents to the baby and a postnatal check-up) were most important in reducing neonatal mortality. The intervention was cost-effective. Implementing this intervention in the studied region could save USD 18,310 per neonatal death avoided. Georgia's congressional delegation says a new gun bill targeting illegal immigrants would be an unacceptable violation of their rights. Reps. Austin Scott, Buddy Carter and Lynn Westmoreland joined other Georgia representatives in criticizing the proposal as a "violation of federal law" and "a dangerous immigration enforcement tool." But an immigration reform group called the legislation an "unparalleled piece of legislation." The Secure Communities Act, which would establish a system for tracking illegal immigrants, was introduced Wednesday as part of a comprehensive immigration reform bill. The bill would also allow the use of state and local law enforcement to verify people's immigration status. Critics have warned that the bill would be ineffective because it would require police to verify that immigrants were in the U.S. illegally if they are stopped and questioned. They fear that would divert police resources away from serious crimes. Scott, a Republican from Mableton, said immigration status shouldn't be determined by the actions of an individual. "When you look at that and see all these people that
