Many people suffer from back problems and injury resulting from the collapse of objects, such as buildings, automobiles, airplane wings, etc. This problem is

particularly prevalent for individuals who work at their desks, use equipment that is in high, unstable locations, etc. However, there are many other situations in which a person is likely to be caught under the fall of a part that is leaning against a wall or other object. Thus, individuals who need to have a back brace or otherwise need to be protected from injury resulting from a part that has fallen from a supporting object should provide their own means of protection. Various barrier straps are known in the prior art. However, most of these

are intended to restrain another object, such as a child, from falling out of a child's car seat, or preventing a motorcycle helmet from moving or falling to the ground, and only one is designed to prevent the
