WinTidy is a small and very simple application that allows you to delete temporary files from your computer. It has a very friendly and intuitive interface, and is very user-friendly. It does not require any installation process, so the only thing you need is to extract the program's executable file from the compressed archive and double-click the.exe file to start the application. The user interface is almost similar to any simple file explorer and includes a list of drive letters, or drives with files selected. WinTidy will scan each of the selected drives, and display a list of found files. The user can select and delete the ones that he or she wants. The app can perform a two-step process: a scan and a scan with options. The former allows you to scan all of your drives, and view the details about each file found. The latter will perform a more intensive scanning process, but also includes options to specify the source folder(s), file name(s), type, modification date and version, attributes, size, and attributes. Just like the former, the latter also includes a search feature for extra files. You can also set the process to ignore files and folders you have marked as a 'protected' item. WinTidy's features and functionalities, as well as its pros and cons, are briefly explained in the following text. During our evaluation, WinTidy displayed several items in the results list which are not necessarily ripe for deletion, such as antivirus backup files. Unfortunately, the tool does not integrate a feature to backup data, in case the operating system starts experiencing problems after file removal. Further on the downside, you cannot sort files in the results list or use a search function; improvements are highly required in the visual department.
