History Development Since its beginning, AutoCAD has been developed by Autodesk, an American software company based in San Rafael, California. The initial version, AutoCAD 1, was released on December 15, 1982, for MS-DOS and was priced at US\$499. Autodesk claims that it was developed as a "generic" CAD program, which was released without considering any software already in existence. The most significant changes between the first two releases and the second release, AutoCAD 2, which was released in December 1985, were the inclusion of the Drafting Tools and the End User License Agreement (EULA). AutoCAD 2 was released for MS-DOS and Windows. For the first time AutoCAD was released for a graphical windowing system. By November 1986, Autodesk had already sold 1,000 licenses of AutoCAD 2. The company grew rapidly and soon sold a million copies of AutoCAD 2. The third major release of AutoCAD, AutoCAD 3, was released in November 1988. AutoCAD 3 included the AutoCAD Electrical Toolbox, the first CAD application for electrical engineers. The AutoCAD 3 user interface, which has remained mostly unchanged since its inception, included a 3D viewer. In addition, the application's platform was now Windows 3.x. Finally, AutoCAD 3 introduced the concept of "running under the hood," which is a software layer below the application that handles user input, output, and menu commands. In April 1989, Autodesk released the first version of AutoCAD for personal computers, which was based on the MS-DOS operating system. The new software, which came in the form of a floppy disk, allowed users to create drawings on a PC, but not to edit them. In November 1990, Autodesk released AutoCAD 4. AutoCAD 4 was the first version of AutoCAD

The new architecture is based on OpenGL and its object-oriented programming interface (OpenGL Application Programming Interface or OpenGL API). OpenGL is supported on Microsoft Windows, Apple Macintosh and Microsoft Windows. Interface AutoCAD 2016 uses a Windows 10 style interface. When the user opens a drawing the interface loads and runs automatically. The interface consists of: The document window, which shows the drawing content, in a grid layout A sidebar panel showing the current commands available A status bar panel, which lists the drawing tools available The palettes window, which lists the drawing tools available The user can switch between using the "enter" and "tab" keys to navigate through the interface. The "enter" key moves the user to the next control and the "tab" key moves the user to the previous control. The interface is a "non-modal" design, allowing the user to interact with the other software running on the computer at the same time as the AutoCAD interface. The user can also dock a window and then take the dock away to free the space for other programs. The Interface can be customized. The user can choose a Theme and Color Scheme for the application, thus changing the style of the interface. The document window and sidebar are selected in the Theme configuration window. environmental factors, particularly those of dietary origin, in the development of breast cancer has been investigated. A number of studies have shown
an increased risk of breast cancer in populations with high intakes of fat, whole milk and red meat, and a decreased risk of breast cancer in populations
with high intakes of green vegetables and fruits. It is proposed that these associations are due to dietary fat and iron being related to mammary cancer
risk. In addition, in populations with high intakes of dietary fat and/or iron, beta-carotene supplementation may prevent breast cancer. The relationship
