Most of this guide is going to show users how to use the basics of Photoshop, that is, manipulating your image on a layer by layer basis. You will probably be working mostly in the Layers tab. Layer Basics Photoshop has two types of layers. The background layer and the foreground layer. You can add a layer onto either one of the two.

Background Layer: The background layer is always on top. This one is used for creating your backgrounds and is the one that the other layers will be drawn upon. You have three ways to add a background to your image. Choose Layer > New > Layer From Background. Or press ctrl+shift+n, or cmd+shift+n. Alternatively, press the + sign at the bottom left of the Layers palette.

Foreground Layer: Foreground layers are on top of the background layer. You have two ways to add foreground layers. Choose Layer > New > Layer From Background. Or press ctrl+shift+n, or cmd+shift+n. Or press the + sign at the bottom left of the Layers palette.

Layer Notes: You can have as many layers as you want. To create a new layer, select the top layer. Then press Shift+J to create a new layer, or choose the bottom layer at the far right of the Layers palette.

Folders: There are currently eight layers or folders in Photoshop, but you can add more by creating your own. To create a new folder, press ctrl+shift+n, or cmd+shift+n. You can also drag a background layer and drag it into a folder to use as a folder in Photoshop. To open a folder, click the folder's tab (the little arrow). See Photoshop's Layer Tips for more tips on folders.

Layer Tools You have a number of tools to manipulate the layers. Note that you can adjust any layer's opacity with the Opacity tool. You can add various effects to layers. For example, you can add a Drop Shadow, a Gaussian Blur, or a Pattern Overlay. You can move your layers

around. You can also change their order. See Photoshop's Layer Tips. There are three types of Fill-paintings: Fill, Stroke, and Gradient. You can add one of these over a layer, such as a color, gradient, or a pattern. Note that you cannot add more

A typeface designer's open letter to Type Directors Club - zzkt
===== dzampaul This is so great! Thank you for writing this! As you mention how funding is only per-determined by the ability to show visibility in the industry, I am curious as to how open-source font development is handled. Is the free-for-all approach ever taken (e.g. FreeType)? And, if so, does repository development come with any limited permissions? For example, can someone have the ability to create repos for their fonts, but not other repos? ~~~
zzo38computer I don't know, and perhaps someone else can answer. However, I believe that there are different types of contributors. There are the ones who make the font, and their job is to make it perfect. There are those who make it functional and there is even the one who makes the user interface to use it, if necessary. The Type Directors Club should not have only the first type, though. There may be some rules to determine who is allowed to do what. For example, one is not allowed to make commercial fonts, nor make fonts that are only available in a restrictive license, except if the license has the purpose of making them free to all.
