Create a new project, name it as 'Map Template', then add a plane in it. Add the keygen of Map Template project in the command line. Open the Map Template project, and import the created layers from Map Template. Save the project with name 'Map Template'. Do the mapping from the physical to the virtual model. Do the most important editing to your project. Save the project. Import the project in Autodesk 3D Warehouse. Open Autodesk Project, do the mapping from the physical to the virtual model. Delete the physical layers of the Map Template project. Q: Is the Map Template project inside the Autodesk Autocad or Autodesk Autocad Architect 2019 folder? A: It depends on the Autodesk Autocad or Autocad Architect version you use. You can find the Map Template project in a folder: C:\Program Files\Autodesk\Autocad 2019 or C:\Program Files\Autodesk\Autocad Architect 2019\Map Template. If you open the Map Template project with Autodesk Autocad 2019 or Autocad Architect 2019, it will use the project in the former folder or the latter. The new Markup Import and Markup Assist let you send and import feedback into your drawings in a single step. Also, once you complete the process, you can automatically add changes to your drawings. Design Review: Turn your feedback into a completely new set of CAD layers and documents to keep them organized and accessible. Examine layers in one of two views (just markers and drawing parts or design parts and drawing parts). See improvements to layers right on the drawing with the new Design Review (video: 1:43 min.) Layers are a critical part of the design process. They allow you to control the level of detail and complexity of your drawings. You can create multiple layers that contain only a portion of the drawing, or you can create a layer that only contains part of a drawing that you are creating. By creating these layers you can selectively add or remove parts of your drawing to help you keep track of design changes. With the new Design Review, you can now see the changes to your layers in a side-by-side view. The Design Review makes it easy to quickly locate and apply changes to parts of your drawing. Assist Tips: Refresh layers in Drafting & Annotation Views Automatically place comments on your drawing and update drawing and annotation layers based on specific parameters. The new Assistant allows you to: Edit drawing and annotation layers in two views (just comments and drawing parts or design parts and drawing parts). Find text and place comments. In the New Assistant, you can edit drawing and annotation layers in two views (just comments and drawing parts or design parts and drawing parts). You can also find the text in the comments by typing in the name of the layer. After placing a comment, you can decide which set of annotations to display by clicking the appropriate check box.
