edit photos You can start using Photoshop Elements by either starting it up from the Windows desktop or by running it from the disk. First you'll need to load an image so that you can use it in Photoshop Elements. You can save a photo to a floppy disc or you can use a computer with Adobe's free software available here. You can also use your phone to import photos. Just download and install the Photoshop Elements app from your app store. Once you've installed it on your phone, you can tap the Camera icon in the top left corner, then take your photo. After you've saved your photo to your computer, go to File > Open. Next, select to open the file from the folder you saved it to, then select the photo you'd like to use in your project. Now you'll need to import your photo into Photoshop Elements. From the Home tab in the top

menu bar, click on the Import icon in the bottom-left corner to import your photo into Elements. If you've just saved your photo to your computer, you'll see the button to open the photo. Now you'll have to adjust the photo. Click on the Layers icon in the bottom-left corner of the Elements window and click on the Create New Layer button. You'll then see a new layer in the Layers window. (You can use this layer to select which part of the photo you want to keep and which parts you'd like to edit.) Next, you'll do some basic edits to your photo. Drag the drawing tools out from the Tools bar and use them to draw around the edges of your photo. You can edit your photo by selecting Layer > Modify > Rotate or Zoom. Next, you can add effects to your photo, such as brightness, exposure, levels and text. For these tweaks, click on the

eye icon in the top menu bar, then click on the tool you want to use. You can also add basic photo enhancements to your photo using the sliders. To get access to these tools, click on the icon that a681f4349e

Q: How do i add javascript/css to a polymer element? In an iron-ajax i would do this:

```
{{ dialog.title }} {{ dialog.content }}
```

How do i add a custom js file to this? Or do i have to

use Polymer inside this div? A: Yes you can using the iron-ajax element: ... {{ title }}

```
Polymer({ is:'my-element', properties: { title: { type: String, value: '', }, handleAsJson: { type: Boolean, value: false, }, requestHeaders: { type: Object, value: {}, }, }, responseHandler: function(data) { this.title ='success'; }, response: function(data) { this.responseHandler(data);
```
