CD Library Activation Code supports the following operations: file creation, file removal, browsing, sorting, text processing, and search. CD library can be used offline. CD-Rom Drives: Each drive has its own catalog. If you add an empty CD-Rom drive to the library, CD Library will create a catalog for this CD-Rom Drive. You can browse this catalog from your application on a local or network drive (if the computer is on), or from the CD-Rom drive itself. File creation: To create a file on a CD-Rom drive, click on the drive name and select "Add File" from the Menu-Bar. You are prompted with a window for the CD-Rom drive and the file name. CD Library will automatically create the file on the selected drive and add it to the library. File removal: To remove a file from a CD-Rom drive, click on the drive name and select "Remove File" from the Menu-Bar. You are prompted with a window for the CD-Rom drive and the file name. You are asked if you want to remove the file from the library as well or only the CD-Rom drive. After the file has been removed from the drive, the file will be permanently deleted from the computer and off your device. To remove a file from the library, the file must not be opened. Browsing: Browsing is the process of viewing all the files of a CD-Rom drive. Each file is presented in a separate window. Click on the name of the file to open the properties window. Sorting: You can sort files by clicking on the column headings. This will present the list in a sorted manner. Text processing: You can do text processing such as extracting text from a file, updating the text from another file, and so on. Search: You can search for a file or a portion of a file and then open it for reading. Search is case sensitive. You can specify any text or a portion of a file to search. You can also include special characters in a search. Notes: The CD Library will create catalogs of drives offline, the catalogs will be saved on your computer or device. Any file you add to the catalog in the offline mode will be moved to your device in an

Fully supports Windows XP, Vista, Windows 7, 8.This proposal requests support for the study of a novel component of the HIV-1 transactivator protein, TAT (V-Rev-TAT), and the potential importance of its N-terminal arginine residues in TAT-mediated transcription. The principal investigator, Dr. Mark Gerstberger, a member of the group, has recently discovered that TAT also potentiates signaling by a recently identified second messenger, Sphingosine-1-phosphate. Sphingosine-1-phosphate is a known second messenger whose cellular functions include induction of differentiation and inhibition of DNA synthesis. Sphingosine-1-phosphate's mechanism of action is mediated by a 14-amino acid peptide, presently known as the Drosophila patterning protein Sphingosine-1-phosphate-activated receptor (S1P1). Because of S1P1's similarity to other G-protein coupled receptors (GPCRs) such as the EP2/EP4 receptor family, important in the regulation of gastric acid secretion, the new effector site, Sphingosine-1-phosphate-S1P1, has been named G Protein Coupled Receptor Expressed on Serum-stimulated T cells 1 (GPRCES1). The research proposed is centered on the N-terminal sequence R
