FlySpeed SQL Query

The intuitive application makes it easy to create or re-write SQL scripts. If you have a MS SQL Server, MySQL, Oracle, SQLite, PostgreSQL, or MySQL database you can view the data from any table and use it in several ways, without any SQL programming. There is no other free program for creating, formatting, sorting, ordering, and joining multiple tables on multiple servers. Also, you can use the custom order for tables in a single output file. Using FlySpeed SQL Query you will be able to create or re-create many SQL scripts in the shortest period of time. It allows you to understand the database much easier and more efficient. You will feel great and save money every time you can re-write scripts. You don't need to be a SQL programmer to achieve amazing results in a matter of minutes. You can easily separate tables, re-use them, join them, create simple queries, generate output files, and use SQL filters. You can even simply sort the data into groups. You can also easily comment non-executable lines and quickly format the SQL code. Additionally, you can reformat the current script or simply choose the letter case. With FlySpeed SQL Query you can easily combine several tables and add text to tables, but you cannot change the name of a table. Sometimes you need a quick solution to execute a SQL query and you don't want to learn the whole syntax. With FlySpeed SQL Query, you can simply view the data you need, add filters and conditions, so that you will see the data you want and simply execute the script. It is really simple with FlySpeed SQL Query! Start now and you will have fun with it!
