Ad AutoCAD has grown into one of the most-widely used software applications in the world. AutoCAD contains the ability to lay out architectural buildings, bridges, highways, electrical networks, machinery, and other three-dimensional objects. In addition, AutoCAD provides an advanced 2D drafting capability, like architectural and engineering drafting programs. AutoCAD allows you to create, modify, and maintain CAD drawings. You can use AutoCAD to design and

draft two-dimensional and three-dimensional objects and mechanical engineering drawings. Before you start using AutoCAD, you need to download the software and install it on your computer. **AutoCAD** is a powerful and sophisticated app. It has a steep learning curve, and requires a lot of time to master. Steps [ad#] Basic Concepts The drawing area is where you will create CAD drawings. This area is a window or box containing the drawing, represented by a line or frame. The drawing itself is composed of the objects you create within the drawing area. An object is simply a collection of lines and faces (called "Edges"). You can create objects and edit them with tools, such as straight lines, arcs, ellipses, rectangles, splines, and bezier curves. You can also create objects in various shapes and sizes. The drawing itself is also composed of objects. You can modify, add, and delete objects in the drawing. The grid is a visual aid that helps you align objects and draw them in a more organized and efficient manner. The drawing area is also divided into different sections by the grid lines. The draw lines (called "Drawings") can be configured to appear in various ways. You can zoom in and out of a drawing. Zoom in to increase the size of the drawing; zoom out to decrease the size of the drawing. You can use dynamic input in AutoCAD. Dynamic input allows you to type any command and any text in a form automatically. This feature is found under the Dynamic Input menu in the ribbon panel. Drawing Toolbars AutoCAD contains many toolbars that contain frequently used features. A few of the toolbars that you will use the most often are: Drawing toolbar The drawing toolbar contains all the basic drawing commands that you need to create a drawing. These commands include: Lines You can create

AutoCAD Architect allows you to model to comply with the requirements of the international building code. AutoCAD Civil 3D allows you to model complex civil projects. Customization of AutoCAD Customization of AutoCAD can be done with custom programming languages and extension languages. Customization may also be achieved through programming AutoCAD commands. The most commonly used customizing methods are: Customizing AutoCAD by modifying the AutoCAD source code Customizing AutoCAD through the use of commands Customizing AutoCAD through the use of scripting languages Customizing AutoCAD through the use of extension languages See also AutoCAD Architecture List of AutoCAD extensions References Further reading External links AutoCAD Architect Autodesk Exchange Apps Category:AutoCAD//--- // // Copyright (C) Microsoft Corporation. A: A while ago I used a free open source tool named CAD VIABASE for this, but I found it harder to use for my own projects (in fact I'm not a big fan of Autocad at all) than using FreeCAD. I think that if you use FreeCAD, you can do it with an add-on called FreeCAD-X-Keys-Plus. It requires Wine though. Risk of developing HIV infection among homosexual men in Australia. This study aimed to assess the extent of HIV seroprevalence among homosexual men in Australia. A population-based study was conducted in Sydney and Melbourne. Self-administered questionnaires were used to obtain information on sociodemographic characteristics, sexual behaviour and access to HIV testing and treatment. Among homosexuals recruited in Melbourne, the age-standardised seroprevalence of HIV was 20.1% (95% CI: 16.5-24.0%) and the number seropositive was estimated to be over 10,000. The study also demonstrated a high level of unprotected anal intercourse with a regular partner and a lack of consistent condom use among men who had a regular partner. Results from the Sydney sample indicated a lower prevalence of HIV infection among homosexual men (9.8%; 95% CI: 6.8-13.5%). The findings are consistent with previously reported data on HIV infection among homosexual men in Australia. The possibility of an increasing HIV prevalence, especially among men who have sex with men, and the effects on the homosexual community need to be considered in relation to the possible effect of the HIV treatment programmes which are now available in Australia
