## NoteItAll Free Download

NoteItAll is an application especially created for those who need to take notes using either their computer or tablet. User-friendly interface Though the subtitle is very accurate, it's recommended that you first read the manual before beginning to use the application. That's not because NoteItAll is complicated in any way but rather that it has a different way of doing things, opposed to how you might be used to. NoteItAll's GUI is as straightforward as it can be since all the tools you need to create and edit the notes are available in a top toolbar, leaving the rest of the main window available for the content. Tools are accessed with a simple click on their icons and you also have some available through the use of context menus. Designed for PC and tablet NoteItAll is an application made to work on both desktop systems, notebooks and tablets meaning that it supports the use of a pen, stylus. This feature makes NoteItAll very practical when it comes to creating sketches, adding annotations to images or scanned documents and similar tasks. Moreover, you are able to export the projects and transfer them across different platforms. This way it's possible to work on the mock-up of the sketch on your computer and add annotations to it using your tablet. Intuitive tools NoteItAll provides a series of basic drawing and annotation tools that are very easy to use. You have brushes of different sizes and colors, erasers, shape and line tools, as well as the much needed undo and redo options. With a simple click on the digital sheet of paper you are able to start drawing, holding the left click mouse button enables you to start typing text while the right one brings out a context menu that offers various functions. Create and edit notes In closing, there are a lot of functions to discover about NoteItAll other than those that have been mentioned and which make it even more handy. All you have to do, is try it out. The Website, which is a free GIS Portal, is provided by Department of Environment, Forests and Climate Change, Govt. of India and the Maps contained on this Portal are developed using ArcGIS technology.Q: How do I get the target attribute of the clicked element in my event? In my Angular 4 project, when a user clicks an element, I want to return the html element that was clicked on so that I can later use it to

## What's New In?
