New features and improvements were added to the Edit control in Delphi XE8. One of the new features is the ability to stretch and center the image inside the control. With just a few clicks you can open and edit the image as a template without any additional tools. The original image could be stretched to be any size. This feature is a part of the Edit Image dialog. Now you can also center an image inside the control. To do so, you must enter the Edit Options and uncheck the Stretch checkbox. The image will now have the size defined by the Parent control. StyledEdit StyledEdit is a sample unit that shows how to create and style a content-aware text editor. The program provides a palette of styles that contain all the controls and components used in a typical text editor application. With StyledEdit you can modify standard controls, create your own controls, create your own content providers, pick colors and fonts, and apply those modifications to any control in any program. StyledEdit includes the following components: StyledEdit - A sample unit that shows how to create and style a content-aware text editor. This sample is part of a component set for Delphi programmers. Features: - Specify the components and properties of any control inside the system. - Modify standard controls. - Create your own controls and content providers. - Modify the system colors, fonts, and styles. - Apply those modifications to any control in any program. Additional information: See the unit doc for a more comprehensive description of StyledEdit's functionality. View the demo applications: - StyledEdit (StyledEdit.dfm) - StyledEdit Demo (StyledEditDemo.dfm) Install StyledEdit: You can install StyledEdit using the Delphi Online Update. To begin, select "Quick Connect to the Component Library" from the Help menu. Then, click the "Get more components" button. Your program will download and install the components directly into your current project, as part of your project compilation. If you do not have the component online, you can download the components in two ways: Specify the component library you want to download. Click Browse, select the component library you want to download (you must have the reference to this library installed in your development environment). Click Add Components to add the component to your current project. If you want to
