Histogram: Skimming an Image for Level After you've edited your image as much as you can with Photoshop's various editing tools, you'll probably notice that the histogram, a graph that shows you the amount of color for each pixel in your image, is entirely out of whack. That's because you've gone too far into the reds or too far into the blues, and some areas of your image just don't have enough color in them. Unfortunately, when you look at your image, you can't see where these color areas are, so you'll have to take the extra step of scanning your image to find these areas of missing color. * Select the Rectangular Selection tool (T), shown in Figure 3. Hold the Shift key as you drag the tool across your image. When you select an area of your image with the Rectangular Selection tool, your selection

In the past when we come across different products it would always be a heart-thumping moment for the customer to understand its usage or features. However, in today's digital world with the rapid increase in technology and with the changing trends, its getting hard to manage and understand the different products as well as their features. As a result most of the times, the customers are unaware of their features in addition to the usage. Manufacturers and companies have started releasing their product in the market with a few features only instead of the whole package. We understand that the other companies and suppliers also have to offer value-for-money and thus they come up with this kind of products and services. As per the recent surveys around 50% of the customers are not aware of the functions of the product and service they are purchasing. Not to mention that the other half of the 50% know but they don't understand the use of the product as well as the benefits. With the help of the people working in technology and businesses, to understand the need of the customers and the support they required, we have managed to come up with a "How-to-Know-What-to-Buy" guide that every product and service should deliver to help the customer understand and know exactly what they are buying and how it will help them to get the maximum out of it. Here is a quick look at few of the products and the use of the products: Life-Saving Devices These are the things that every one knows and understands. These are things that in the market if they are not available or popular, then the competitors would have offered it or even developed their own. Doctors: Doctors are the ones who save lives. They know what to expect. If the healthcare professionals in their area cannot perform the operation, they are the ones that step into the theatre and save lives. In this guide, we are going to discuss about the "How-to-know-what-to-buy" guide for the customers going to use the care devices. Banks: Banks are the only ones that offer loans to the different people, companies and individuals. They understand the requirement of money that comes through the different avenues. They offer the best money to the customer that he/she needs to pay. In this guide, we are going to discuss about the "How-to-know-what
