Histopathology, serology, electron microscopy and molecular characterisation of allospecific IgG antibodies in broiler breeders: prevalence of cell-mediated immunity. The aim of this study was to characterize allospecific antibodies in broiler breeders by histopathology, serology, electron microscopy and molecular characterisation by conventional PCR and nested PCR for avian leucosis virus. Based on the serological and histopathological test results, it was observed that the prevalence of allospecific antibodies was 28.8%

---

(30/105) in the population of broiler breeder chickens. In cross-sections of the duodenum, the prevalence of different allospecific antibodies were seen as follows: 64.3% (23/36) of the samples were diagnosed as cellular lesions and serological lesions were observed in 38.9% (13/34) of the samples. The serological lesion group showed

### **Car Sales Organizer Deluxe Crack + Incl Product Key Free PC/Windows**
