Although Photoshop is not intended for writing documents, it's a must-have application for any creative professional. Photoshop comes with the following free and commercial features. 1. Selecting & Cutting You can cut an object with a rectangular selection. You can also use Paths to cut a path, or make a selection that snaps around an edge or follows an object. You can copy or move an object to create a copy. You can make it appear as a regular picture by pasting it into another location. You can add or subtract from it to create a 3-D view. You can resize it, rotate it, change its color, or move it. You can use the paint bucket tool to fill an object with a new color, or make selections from it to copy or paint over an area. 2. Q: Docker: access to docker0 private address space The docker documentation says: By default, docker run will spawn a new container in the host system's own network namespace. I want to create a network interface in my docker network that has the same IP range as docker0 IP addresses. A: Docker does not expose ports by default. You need to expose your containers ports directly. You can do that with docker run. See: docker run --name web1 -itd -p 80:80 web1 There is a good list here of the commands you can use to start a container. Physiological and growth responses to four years of growth hormone replacement therapy in prepubertal children with GH deficiency. To study the long-term efficacy of GH replacement therapy in children with GH deficiency, six prepubertal children with moderate GH deficiency were studied before and during GH therapy for 4 years. Before therapy, patients' height varied from -4.5 to -8.0 SD score (SDS) for chronological age. After the mean age at start of GH replacement therapy was 7.2 years (range: 5-10 years), the patients' mean height SDS increased from -2.3 to -0.6 and the mean height velocity SDS from -0.7 to 2.0, respectively. This was associated with a mean growth rate of 3.7 cm/year after 1 year and of 6.7 cm/year after 4 years of treatment. This resulted in a rise in the mean bone age to an adult level. The serum IGF-1 concentration increased from a mean of 65.2 +/- 21.9 microg/l (SDS) to 103 +/- 15.7 microg/l

Q: Are there any online "commit" message libraries? I've sometimes found myself trying to rewrite the same commit message over and over, and over again. For example, here's one of my recent commits, which I can no longer recall without looking at the rest of the code: Added a private method to the bill model to return the latest revision of that bill's code/lineage (Assumes that we mean that the code was updated in revision 13, and so on...) I'd like to have my team write a custom message-approval process, and so it's helpful to have the commit message abstracted like this: Added a private method to the bill model to return the latest revision of that bill's code/lineage I'd like to have a message like that easily usable, something like "we've just submitted bill lineages 15 to 17, any feedback would be helpful". Is there a tool/library/module for this kind of thing? Or maybe just a little something I can add to my editor? A: You might be looking for Commit Message Template. It lets you set templates for all commit messages. There are lots of ready to use templates available for free. You can write your own templates too. Here's a direct link to the Git commit template. To start writing your own templates, create a file named gitmessage in your home directory. Then, copy the templates from git-templates/git-tpl.txt and start writing. It won't be difficult. Structural basis for enhanced amine activation by the active site of the aminoacyl-tRNA synthetase MRS-1 from Methanosarcina barkeri. Methanosarcina barkeri MRS-1 is a rare aminoacyl-tRNA synthetase (AARS) that is not only an amine ligase, but is also a synthetase of the substrate molecules L-homoserine lactone (LHSL). The crystal structure of MRS-1 has not yet been solved because of its failure to crystallize. However, it has been suggested that the active site of MRS-1 possesses distinct structural properties. Here, we solved the crystal structure of MRS-1 and examined the three-dimensional structure by bioinformatics. We found that the active site of MRS-1 possesses an expanded
