Q: How do you install software from a software repository in Kubuntu 18.04? I'm looking to install "Angstrom" from the Angstrom project on my Kubuntu machine. How do I go about installing it? I was looking at the Software Package Index for Ubuntu and was given the command line command: `sudo apt install angstrom` Which returned the error E: Failed to fetch The requested URL returned error: 403 Forbidden This is what I was given. I didn't really understand what it was talking about until I made my own experiment with this command: `sudo apt update` `sudo apt install aptitude` So which command should I use?
