A 64-year-old woman had a mass on the left mastoid bone. She underwent mastoidectomy at a local clinic, and biopsy specimens were taken. Histological and immunohistological studies revealed a synovial-like area, which led to a diagnosis of Ewing's sarcoma. The patient was referred to our department, and cytogenetic analysis revealed a 46,XX,t(8;22)(q24.1;q11.2). FISH analysis showed EWS and FUS were translocated on chromosome 8, and EWSR1 was located on chromosome 22. A diagnosis of Ewing's sarcoma was made. We report a

Thanks to its unique motion-sensitive awareness, it can easily read the user gestures, giving them a sense of physicality. Visually, you have access to the advantages of 3D printing while the editing can be easily managed in a similar way to 2D CAD software. The entire prototype can then be exported to the P2 format, where it will be readable by the open source Arduino IDE and CMSIS-DAP. The Pyware 3D editor lets you work in a natural manner, thanks to its ability to recognize your gestures. This makes it ideal for both professionals and beginners as it is super easy to use. The program has a simple workflow, with 3 main stages; modeling, reviewing and simulation. The last 2 stages are very similar to real-time simulation software, which is perfect for prototyping and demonstration. In addition, you can complete all steps in the same time, without having to export each step in a different format. This allows you to avoid importing errors and ensure consistency. The modeling section allows you to create your design virtually, changing the colors, shapes and material. It also lets you add text, buttons, grids and other elements in an intuitive way. Afterward, you can import the model to the Pyware 3D editor, where you will review it in 2D. You can also check the final print quality and preview the 3D print. The results are saved for further use and can be exported in a variety of formats. From Pyware
