1. ****Define the layer.**** If you select the layer icon in the Layers palette (shown in the margin at right), you see a thumbnail and icon. 2.
- **Create a new layer.**** Select the New Layer icon from the Layers palette, or choose

Create a New Layer from the New Layer icon in the Layers palette. (You also can click the New Layer icon at the bottom of the Layers palette and type the layer name you want to use.) After you create a new layer, Photoshop opens a new, empty window. 3. ****Position the image on the new layer.**** Your new layer is displayed in an area called the active layer. Click the small empty area to

the left of the name, and drag your image or a selection to the new layer's window. The image

you placed on your layer appears when you select the layer in the Layers palette. 4.

****Change the image's size.****

Click the large square next to the layer's name to choose from preset sizes in the New Layer dialog box. Choose a size that matches the image's finished size. After you select a new

size, the image expands to fill the new area. 5. ****Resize the new layer's window.**** You can control the dimensions of the new layer's window. Click the small square in the upper right of the layer's name to open the New Layer dialog box. Click the Width or Height field to change the dimensions. You also can position the layer above the active layer by dragging the layer icon to the

top of the Layers palette.

Photoshop is a feature-rich program that enables you to perform many different tasks. You create a new layer for all images that need editing. After you finish editing a layer, you can flatten all the layers to create a new document with your editing. (Flattening layers is covered in this chapter, in the "Flattening Layers" section.)

After a layer has been flattened,

it's saved with the name of your image. It no longer appears in the Layers palette, but it remains as a copy of the original image. If you decide that you don't want to make changes to a particular image, click the eye icon next to the layer's name to remove the layer from the active layer. When you remove a layer, Photoshop removes all the history associated with that

layer from the

Q: How to publish source code of keygen used to crack MD2/MD4 i cracked MD2/MD4 and MD5 some years ago and published them. the software i wrote is open-source and hosted on Sourceforge. now some years later somebody cracked md5/md4/md2. of course the software used to crack the hash

will be published too. my question is, what i do to prevent this? how to publish my software so i can't be cheated by someone who bought the cracked software instead of buying software to crack the MD2/MD4/MD5 he should buy? i doubt that my software is secure enough, since i cracked MD4/MD5 anyway and since the used software is cracked too. sorry for my bad

english. A: Open-source projects are not defined by how many people are involved (or how secure they are), but rather by how easily one can verify that the project is true, open, and properly licensed. You could try to sue the person who published the key cracking software, but the problem is that you have no idea who he is (you haven't even released your name, so he can use that as an

anonymity cloak), so any judge will throw out the case after having looked at that. If you want to sue someone, sue them by their IP address. So, to prevent people from buying cracked software, instead of actually selling the software, just ask for money upfront and do a site visit to make sure that the user follows your conditions (either directly or through a service like Trustpilot). A: With

sourceforge, you will have to "sign up" to maintain the license, and register a copy of the source code. If the cracked code differs from your own, you can then request the user to change his copy. This is how the sourceforge terms ask users to behave, and the way that they do do it. By the way, there are plenty of free software toolkits to reverse-engineer cryptographic algorithms and

tools. It's fun! A: The simple answer to this is to create a web page that provides the hash of your keygen, along with the original, and links to the original. That way the cracker has a single place to go to verify that you are who you say you are. I would look for something a little more complicated, like a sandbox

What's New in the?

As we all know (and let's be honest, you probably haven't been this past year and a half), Riff Raff is not only back and still looking sick, but he also has a new single/video coming soon. The track entitled "Slash Your Tires" follows up a few mixtapes and last year's "Bitch Magnet" already, but I would recommend that you watch the video before reading what I'm about to say. It's actually been a

while since we've heard music from Riff Raff, but maybe it's because of how great the music is. The guy really has a unique way of making music that I've never heard before. This is a mix between EDM, house, and some "other" style music. It's entertaining, sure, but it also has a weird quality to it that really sets it apart from other songs. With that being said, the music is amazing, so you're

definitely not missing out by listening to this. Unfortunately, this can't be heard until he releases more music, but I'll say this: watch the video above and hope that we hear more from him soon.
